

ABSTRACT

The present invention aims at providing a pile fabric that has excellent voluminous touch and recovery property while exhibiting soft touch, and touch closely equivalent to natural furs.

The present invention relates to a pile fabric having a level difference comprising at least a longer pile part and a shorter pile part, wherein a fiber with a flat cross section shape as a shorter pile part is included at a percentage of 30% to 70% by weight to a total weight of the pile part, a difference between an average pile length of the longer pile part, and an average pile length of the shorter pile part is 1 mm to 5 mm, a fineness of a fiber constituting the longer pile part (DL) is in a range of 0.7 dtex to 8 dtex, and a ratio with respect to a fineness of a fiber constituting a shorter pile part (DS) satisfies a relationship of $0.1 < (DL / DS) < 1.0$.
